**THE GLOBAL ENVIRONMENTAL RECOVERY,
REGENERATION AND THE SAVING OF PLANET
EARTH**

THE PYRAN ENVIRONMENTAL ORGANIZATION, MALAYSIA (TPEOM) (NPO)

THE BEGINNING OF THIS CONCEPT;

Recently the full attentive concept of this Planet Earths Environmental status did enter into my mind telling me that planet Earth is on its path of its soon to be Environmentally dead by way of toxic pollution termination.

However;

TPEOM is destined to save the planet Earth from toxic waste pollution that is taking over the environment and terminating the planet and all living species living upon planet Earth.

TPEOM will start saving the planets environment by Tuesday 25 June 2030 and may have it completed before 2040 by the installation of many ~MEC units into every city on Earth and into all rubbish dumps upon this planet to remove all the rubbish from those rubbish dumps.

TPEOM is Destined to create the MEC ~ units of MEC Matter to Energy Conversion ~ .

Therein and thereafter the MEC will be the prime replacement for all waste disposal modalities. (Article I, P1) to save the planet Earth by destroying all the toxic contaminating wastes scattered into the soil, aquatics and atmosphere by humanity, by way of the MEC matter to energy conversion unit system.

Planet Earths Environmental termination is being done by way of the discarded waste products humans produce, use and then discard, dump into the environment as globally manufactured products that they produced as a source of money by the manufacturing industries of humanity and bought by the public as users of those products.

Then after those products have been used and by way of that use it transformed into an unwanted waste item that then is/was no

longer wanted or needed by humans and thereafter discarded into the Earths environment..

Thrown into the Earths Environments of Atmosphere (Air) Land (soil) and Aquatics (all waters) as human waste as is now being done by the 7,440,762,950

Seven Billion, four hundred forty Million, seven hundred sixty two thousand, and nine hundred and fifty as of 16:54:10 PM at 03/08/2016 and growing at the rate of 60 more per 30 seconds. That is 946,080,000 more per year less 55.3 million deaths per year which makes an increase of 890,780,000 per year times 14 years to the date of the year 2030 to equal 12,470,920,000 more to the now today population of 7,440,762,950 to equal 19,911,682,950 and that IS THE FINAL END OF IT ALL. Unless TPEOM is enabled to do its job correctly as it is destined to do within only the 8 (eight) years after the date of the year of 2030, or should it be made possible to be, then it will be, should you, the population of planet Earth, make help to make it that way.

global.census.gov/popclock/world.

and is the then human population of planet Earth as you read this article and it is increasing by 2,592,000 millions and thousand per day and soon to be the presence of Nine to Ten Billion human inhabitants that will be the count within 34 years and not more than 50 years after this calendar year of 2016 and will be the then registered census counted number by the census bureaus of the (233) countries of the world, Planet Earth, as the then counting of the human population of this planet, Earth. .

[Current World Population & Global Dynamic Meters Indicators](#)

The Census Bureaus known and projected fact is that the human population of Planet Earth will indeed reach the Nine to Ten Billion population mark by or before the year of 2050 which is only Thirty Four (34) years from the now date of 2016 and that will be the definite destruction of the Earths environments as a life sustainable planetary environment by then or before then.

Why? It is a known fact that every human produces a minimum of one Kilogram of waste per day. The volume of one kilogram of waste (0.02831 cubic meter) varies with what it consists of as paper waste, other forms of solid waste, as plastic bags, food wrappers and containers, and other forms of what was a manufactured product container, wet waste (vegetarian, fruit) and in the very worst cases industrial wastes.

Air pollution and the resulting acid rain severely affecting lakes and damaging forests; metal smelting, coal-burning electric generating utilities, Diesel burning electric generating utilities and vehicle emissions impacting on the ozone layer and agricultural and forest productivity; ocean waters becoming contaminated due to agricultural, industrial, mining, and forestry activities removing the trees that do generate the atmospheric oxygen, no trees then no oxygen to breath for any of the oxygen breathing life on this planet.

That volume of waste requires a place to put it, currently it is dumped into landfill waste ~ garbage ~ rubbish dumps if it is not incinerated or if possible recycled into another product that will anyway find its way into the rubbish land fill dumps that fill the environment as toxic waste or as to some of it effectively by way of added moisture transforms into biochemical waste. That toxicity and biochemistry seeps into the land (soil) and deeper into the underground water tables or streams that can or will breed additional viruses, bacteria, germs and other infectious micro-organisms that do reach the surface and get into the atmosphere (Air) and then into some of the human population and causes infections.

Within the recent eight years a rise in new infections are prominent news items in the [Cyber news](#) and more [Cyber news](#) and television news that is plaguing humanity and in a few cases of the new infection medical doctors or hospitals or the [world health organization](#) World Health Organization (WHO) and the [Human Health Project](#). and the Human Health Project do not or

does not have a vaccine or cure for the new infection so people infected with it just suffer or in some cases die from that new waste caused infection.

There are millions of square kilometers of land that is now toxically poisonous to any form of protein based life and many plant based life forms or other forms of species that should and could have been alive now but are dead due to the waste products, discards of the current and some past human population.

Then, a more noticeable problem that will be seen and felt by all will arrive as the discarded waste of the landfills takes priority of the land and the increasing human population towards the Ten Billion mark arrives and that increased population finds that they are to share their living, housing space with a next door neighbor of being a waste landfill being due to there is no other place or space for that dump to be since that all the rest of the land is then filled with humanity or landfills.

A Very nice tomorrow that is coming:

The evident problem is that humanity at large does not have a true one shot solution for the waste management of humanity.

IN all due regards and considerations something is something and that something does take required space for its matter/material presence.

There are a lot of talks of getting rid of that waste ~ rubbish something, but the problem is that when the space place of the environment is a definite confined space then anything that is put into it takes some of the volume of space for itself as it is physically defined as being.

Being that the item is a living person then what will be will be for that one. However, should the item be waste ~ rubbish and it is taking the space that the human must have for its life then the rubbish must go and be gone and out of that environment. That is

the idea of what is needed to be done with all the waste // rubbish in that room named Planet Earth.

For now since planet Earth is an enclosed environment similar to being in a closed room with no windows, no doors or any other means of going out of that room, it then says that anything more that is added to the interior of that room only makes that room small or smaller until the occupant(s) in that room is crowded into standing as a standing place only and when that coming moment arrives when nothing more can be put into that room..

It can at that moment be a life or death situation with an extremely limited choice if any choice is available.

And since there are no readily available exits from that room then it becomes a very compact suffrage.

More rubbish ~ waste will come due to the needs by the person, room occupant, for more. So when the occupant produces more and uses what more was produced and then discards the waste of the produced item into that room as an unbearable problem that will face that occupant...

That room dwindles to smaller. The occupant is seeking a way to exit that rubbish ~ waste from that room and much cash is being spent, and much action is happening but the rubbish ~ waste stays and will not go away by the way of the methods or the ideas of the person in that closed room with no evident exit or type of readily available exit from that room.

Millions of attempts have been made by the occupant and much has been spent in cash and time by the occupant, but the rubbish ~ waste does not leave that room. And every day that comes and goes only sees the bad of being in that room with all that rubbish ~ waste getting to be more rubbish ~ waste until it will be the death of that occupant and that room and any others that are in that room also.

The point is: Currently as is known to that rooms occupant there is no way the occupant knows of as the how to get that growing rubbish ~ waste problem out of that room.

The person just does not see and does not know any way to make it happen.

Yes that is how it is.

By the habitual and only known way of centuries of doing rubbish ~ waste disposal, was to discard it, dumping it, throwing it aside but still it being there with no true solution to it being for real gone has never been proposed or introduced that will get that rubbish ~ waste out of that room and gone from that room as is needed to be done.

OK, in the past centuries there was minimal technology as compared to the now available technology of this century, 2016. So the actual point here is for the person in that room to *apply current technology with some improvements* that will remove all that rubbish ~ waste that is now in that closed room into being out of that closed room and technically making it not being tangibly present as being seen, felt, smelled or tasted by that occupants five environment detecting senses such as sight, touch, smell and taste for this instance of the rubbish ~ waste presence problem.

The occupants other sense of sound detection perhaps does not apply to this instance.

The above dissertation is of a sort that is encompassing the depiction of the rubbish ~ waste problem and mentions the moving towards an opening of the point of what is sincerely for real the needed item of the occupant of that room planet. . . Earth

In all due seriousness this occupant must have a final true solution to the growing waste problem that is now every day decreasing the availability of inhabitable land upon this planet.

The worst choice is to reduce the occupants of that room.

The best of the best of choices is to see a way to actually remove all the rubbish ~ waste from that room for real with no need of any mundane physical so to say type of exit since such a mundane type

of door exit for that, as of now, is not readily available.

Now Here Is The Proposal For A Doorway To Rid Us Of All That rubbish ~ waste.

The only reality true workable way and technically available way is to **CREATE** an exit that is exceptionally outside of the mundane type of conventional doorways.

That doorway, the MEC, is to be a matter to energy converter portal type of exit that will be an exit for all the rubbish ~ waste that is now severely piling up in that severely confined, closed room, planet Earth.

A huge **WORRY!**

That above coming loss of inhabitable land space fact riveted this occupants focused attention into an ongoing conceptual consideration of what modality or methodology would factually, truthfully reverse that now unchecked, ghastly, ongoing and growing toxic pollution poisoning of this planet Earths total Environments and the dedicating of the useable available land space to discarded waste ~ rubbish, the loss of the ozone radiation shield layer that floats above this planets atmosphere and being there to prevent solar radiation poisoning and then the deaths of all life forms upon and within this planet Earth by or before the years of 2050 ~ 2067.

Actually as an occupant of this planet, and in this sealed room, my concept of saving this planet and the sealed room of it is the technological, scientific way of the application of the science of physics as the way of making the above ghastly death of planet Earth stop by way of being resanitized as it is said to be done as per the following **ARTICLES** of TPOEM of this presentation.

The NEED and must do is that all of that discarded rubbish ~ trash must be factually removed
off planet out of this room!

The current methods of waste removal by dumping or discarding

is not a solution, and they never have been, and they never will be. Trillions of moneys can be put into those centuries old ways of rubbish ~ waste management and that rubbish ~ waste continues to remain and will continue to remain as per those methods!

Money to be invested wisely into a final solution is best than to continue throwing money into a bottomless pit of what is being done with no solution.

The wake-up is to invoke an entirely new level of a solution of how to handle this rubbish ~ waste problem

Permanent rubbish ~ waste removal can be done with the MEC.

A rubbish ~ waste solution that is an uncommon and outside of the box way of thinking.

The best exceptional way is to just CREATE an exit that is an exceptionally outside of the mundane way of doing it.

Adding that exit will be the true disposal path to no more rubbish ~ waste within this sealed room planet Earth.

That Exit is to be the matter to energy MEC converter portal type of exit that will be an exit for all the rubbish ~ waste that is now in this closed, sealed room of planet Earth.

The **NEED** is for the garbage ~ waste ~ rubbish is to be out of sight and no longer visibly nor tangibly present. **Just GONE**, truly disposed of. Out and away from this sealed room planet Earth.

The only way of that full disposal is to convert that garbage ~ waste ~ rubbish into another form that is not visible, not tangible and not knowingly detectable to or by the five human senses as being present and it is gone out of this room, planet Earth...

The way of that is the MEC!

The statement of TPEOM stands for two items; The EMC and the **MEC**.

The EMC represents a physics technology of Energy to Matter Conversion.

The MEC represents a physics technology of **Matter to Energy**

Conversion.

Within this waste ~ rubbish presentation the direct main focus point here is the **MEC** unit.

The full solution to waste disposal is the **MEC** conversion of the planetary waste discards of waste into a conversion of it into dissipated energy by way of the **MEC**.

The way of this is to have at hand one or more of the MEC units that can be filled with waste.

Then at the easy push of a button the activation of the MEC happens and the MEC will do as it is designed to do, convert the waste matter contained within its conversion chamber into energy and emit ~ transmit that energy as a dissipated energy wave so that when the doorway // portal of the MEC is again opened the waste that was put into the MEC is not there, is truly gone.

Gone but not gone as in fact energy is not just gone.

The then fact is that the waste material is now not visible, not tangible and not knowingly detectable to or by the five human senses as being present as tangible matter.

No more waste ~ No rubbish landfills and a cleaner room, planet Earth!!

That then is the Gone.

This concept is awaiting its proper opportunity of presentation to the correct receiving party or parties (persons) that are in agreement to the assembly of a team of scientists that will do the Research and Development of the MEC unit.

(This web page//site is an attempt at making that global presentation)

How to make the MEC happen?

The consideration is of the manner of the scientific team that is to form this new form of technology that does need a new atomic element to facilitate the MECs ability to do the matter to energy conversions.

I have specified that there is to be a newly created form of an atomic element as E121 for the atomic list of elements and to be named as E-Metal. The methodology of its creation is specified in another paper within reach of me. This should be done at the large hadron particle accelerator collider of the [European Organization for Nuclear Research](#) **CERN** in Europe at the Swiss French borders.

European particle physics laboratory CERN, near Geneva in Switzerland.

It lies in a tunnel 27 kilometers (17 mi) in circumference, as deep as 175 meters (574 ft) beneath the French Switzerland border near Geneva, Switzerland.

I seek an introduction to the Director of the Hadron Accelerator and within that introduction and with his permission to utilize the Hadron for the creation of the new atomic element, E-121, the E-metal. The period for that completed action, I have no specific. However, in all due regards it will be soon enough to take that element into the MEC project assembly lab in Putrajaya, Malaysia.

My personal consideration is to look into the way of an international collaboration of the top scientists of physics within the disciplines of particle physics, wave mechanics, nucleonic, Molecular Physics, Nanotechnology, Nuclear Physics, Quantum Mechanics / Quantum Physics, Microelectronics and metallurgy. My further consideration is the teaming of two scientists from each of the 197 United Nations free world membership countries of Earth to join TPEOM as an international team membership of TPEOM to be as one of the five hundred and ninety one (394)

scientific physicists team members. .

This team will be doing the active research for the way to the MEC. (If this 394 number is considered overstated, then we reconsider).

And any scientist that desires to join TPEOM is welcome. In order to also maintain the 197 countries profile of the team, TPEOM is to include at least one member from any one of the 197 willing and participating countries so this project is a globally humanitarian project in which those leaders of those 197 countries are supportively happy with the arrangement and the efforts of the global teaming of their countries scientists focused at saving planet earth.

And within that action all the participating countries will historically be credited with the saving of this planet Earth

(Article I)

The application: The Scientific agreements and the starting of the R & D for the MEC and its assembly.

Within the full simple TPEOM agreement of those 394 international scientists from the 197 countries, in their laboratories or offices, universities or homes in their countries begin their focus into the research, discovery and documentation of their research of the science of the Matter to Energy (MEC) conversion system with the consideration of including the atomic element E121 as the foundation part that will insure the facilitation of the matter or energy conversions.

Within the 394 scientists doing that research and development uninhibitedly and conclusively so that each researcher that has reached a conclusion will then after make ready to be sent and to send from them to the Malaysian, Putrajaya assembly team their MEC scientific documentation piece.

Then each of those pieces of documentation is to be sent and delivered to the scientific assembly team formed and selected as the 20 from the 394 members of the international scientific team

and that 20 stationed in Putrajaya, Malaysia will begin the assembly.

[TO TOP](#)

(Article I, Part 1)

The application: The assembly team.

That Malaysian assembly team that will be upon the land considered to TPEOM while in a meeting in Putrajaya with a minister can be at any best location that is accessible by me within Malaysia

That Malaysian assembly team having received and assembled and organized the scientific R & D documents from the international scientific team as sent to Malaysia will then proceed to integrate them within a large assembly laboratory building there upon an acre of land in Putrajaya, Or... In addition, a provision of 20 Individual housings should be there upon that acre of land there in Putrajaya, Malaysia. That place is where an assemblage of the 20 scientists are considered to be gathered as they being the final integrators of all the received MEC documented pieces from the international team of the 394 plus the 20 scientists whom agreed and accepted to become members of The Pyran Environmental Organization, Malaysia for the sake of saving planet Earth by doing this project.

Since we are the assembly team in Malaysia, we, the 20 scientists selected from the 394 scientific team and I, will then begin to do the first final assembly of all of those provided documented pieces of the first MEC. . After each received and recognized piece of R&D documentation being received as the needed piece of the MEC and of where it must go into as being integrated/combined and assembled into being the one, first MEC by the Putrajaya assembly team.

[TO TOP](#)

(Article II)

The application: The seeing of the fully completed MEC unit

The focus is to fully complete, the assembly and formation of the first MEC by Friday, 14 June 2030, or as can or could be accomplished.

**** T**his item (Article II) completed then a conference meeting will be called for in which all the 394 members of the team, and the leaders of their countries, will be called to assemble at the Putrajaya convention center conference room or conference hall and being there to then witness the first semi-public activation action results of the first fully assembled and ready to go MEC unit.

This conference, due to the location, may include government officers of Putrajaya, Malaysia. Therefore that gathering could number into seven or eight hundred + participants convening at that TPEOM MEC presentation.

Possibly the PM of Malaysia may make himself available for that conference. At that time

[TO TOP](#)

(Article II, Part 1)

The application: The Mission of TPEOM

Thereafter Article II is done and it is time to begin **the Mission of TPEOM** of completely placing as many MEC units as can or will be placed country by country by Monday, 21 November 2033 as per Article II Part 2, Part 3 and Part 4..

[TO MISSION](#)

[TO TOP](#)

(Article II, Part 2)

The application: Global landfill recoveries. Soil recovery and land mass recovery.

The application of as many MECs as needed and placed throughout the planet, Earth. In those placements, there will be the emptying of all the waste landfills upon this planet Earth into many MEC units.

[TO TOP](#)

(Article II, Part 3)

The application: Atmospheric recovery

Then many MEC units will also be placed within the most smog polluted metropolitan cities on Earth to begin and to complete the removal of atmospheric toxins from the air of those cities by removing those smog toxins and returning the air as pure non-toxic, non-polluted air as it was in 25 Sep 1752.

[TO TOP](#)

(Article II, Part 4)

The application: Aquatics.

Then many MEC units will also be placed within the most aquatically polluted metropolitan cities on Earth to begin and to complete the removal of the aquatic toxins from the waters of those cities by removing those pollutants and returning the waters as pure non-toxic, non-polluted water as it was in 25 Sep 1752 before the industrial revolution.

[TO TOP](#)

(Article III)

The application: An Unlimited Self Sustainable Energy Source.+ other.

A Primary item.

This energy cell will be configured to provide Voltages, Amperages and Wattages as needed by the application it is to be tailored for as DC or AC EMF.

This energy cell will be the full replacement for all forms of hydroelectric, diesel turbine electric, wind turbine electric and solar electric energy. as well as steam turbine electric, Nuclear electric and Biomass Electric generators

This energy cell can be configured to fit into any hand phone or portable computer .

This energy cell can be and will be configured to fit into Fords Electric car the Tesla as the battery replacement.

The overall concern is to replace all internal combustion engines of all automobiles with energy cell powered electric engines.

This will mostly eliminate the green house gasses being spewed into the atmosphere. This conversion will be the way of regaining the North Pole Ozone layer that is now not there due to the continued emissions of pollutants into the Earths atmosphere. This is also a consideration to reduce or eliminate the unneeded global warming condition of this planet.

Any electric power providing operation as a private or government organization with this energy cell as the primary electric source Item will see their overhead cost of producing electricity fall to near Zero.

That also, in my consideration, should alleviate the overhead costs of the consumer of electricity.

The profile can be; The electric power supply organizations, government subsidized entities takes on an agreement with the cousin company ~ organization of TPEOM and enters into a contract that leases the energy cell to them in the same method and financial agreement as they lease/supply electric power to its customer base but at a much reduced cost with no such maintenance as is needed to maintain a hydroelectric installation or any other such electricity producing facility.

The energy cell without any premeditated abuse will continue on near indefinitely as per its atomic element construction. Minimally

each energy cell is 400 years of operation per each energy cell that is put into operation.

[TO TOP](#)

The Energy Cell

(Article IV)

The application: Medical.

Since the human body is a collection of atoms and a form of energy, then the MEC and the EMC can accept the human body as an item to be converted into energy and then reassembled as the same matter/energy it was before the MEC converted it. The EMC will bring back that human body fully functional while excluding such cells as tumors of cancer or whatever else was not originally specified within the chromosomes of the DNA or Genome architecture of that body.

The final exact, answer to the ongoing human medical condition Complete Medical at the highest, purest and most immediate level.

MOTTO, OBJECTIVE, VISION, & MISSION OF TPEOM AND THE EMC ~ MEC FOR. GLOBAL ENVIRONMENTAL

The Pyran Environmental Organization, Malaysia. (TPEOM)

TPEOM is a Non Profit Organization (NPO) registered with the Malaysian Government (ROS).

MOTTO

For the Love of our Planet Earth, For the Love and care of Life for all.

VISION

I give Hope and care to Planet Earths future to betterment. I give Hope to Humanities continued future.

I give hope and care for all living species of life forms upon planet Earth..

MISSION

(Article II) OBJECTIVE

To fulfill and complete the MISSION Objectives of Article II as of Part1, Part2, Part 3 and Part 4 by Monday, 21 November 2033 and to see and know and have every Objective fully active and to know that all of humanity is seeing and knowing that planet Earth is recovering

its life and planet Earth and all species of life upon planet Earth will surely without hindrance live their full lives and not die of toxic waste or rubbish poisoning. .
